

Project Description

As the prime surveyor for this project, Nelson & Pope prepared a topographic survey including utility survey to specifications outlined by The City of New York Parks and Recreation for Topographical Surveys for approximately three acres of improved & unimproved land at Little Bay Park parking lot, Queens New York. Drawing is complete and N&P is currently preparing updated topographical work.

Horizontal and vertical control was researched via National Geodetic Survey (NGS) web site and was reconnoissanced and recovered in the field to establish accurate controls. The project benchmarks were run from Borough Datum Bench Marks to provide for the necessary vertical control in the proper Queens datum. All primary traverse points in the traverse network were tied down and mapped as required. Mapping was performed by in-house staff and was produced in AutoCAD 2009 and met NYCDPR mapping standards. Wetland boundaries were delineated by our qualified affiliate environmentalists, Nelson Pope & Voorhis, and mapped per NYCDPR standards.
